
DeepSeal Armour Glaze

A HIGH PERFORMANCE CONCRETE SEALER

Requirement: To protect against penetration of water and staining materials through concrete, Masonry blocks earthen bricks or Architectural pavers, or to warehouse storage areas to prevent concrete dusting and staining while enhancing the natural colours of the materials being coated. This inturn affords a Long- term protection against environmental impacts that cause degradation in exposed conditions

How to specify: All exposed surfaces (specify areas and masonry type) Shall be hardened weatherproofed by an application of **DeepSeal Armour Glaze**. The rate of application to be Determined on consultation with a representative of Know-How Concrete Technologies (most surfaces 1lt =4-6m²), all surfaces to be clean and dry (concrete to be 14-21days of age) before application.

Effect: As **DeepSeal Armour Glaze** is a unique combination of very hard penetrating 100% UV stable Acrylic-glazing liquids. Surfaces treated demonstrate a significant increase of resistance against abrasion. This coupled with a high repellence against oils, mild acids and water means that it is an ideal cost effective choice for use in areas such as Car parks, Warehouses and driveways
DeepSeal Armour Glaze highlights the natural colour of masonry produces a “wetted” effect, which is ideal for areas such as exposed Aggregate pebbles, concrete panels and roof tiles.

Recommended: All natural concrete, unpainted masonry and pressed clay products
